

The Juma Step 110 is the latest generation of escalator cleaning machines and replaces the Step 100. Manufactured in Germany by Juma, the same factory that has manufactured the Rotomac and Step 100 for over 20 years, the Step 110 has all the features and benefits of the Step 100 with two significant upgrades.

Juma’s highly trained team of engineers have both increased the number of brushes and changed their construction/design to ensure that the Step 110 is the best designed and manufactured escalator cleaning machine in the world.

FEATURE	BENEFIT
18 cleaning brushes vs. 15	More efficient and faster cleaning process
New brush holder	More pressure on the steps; faster cleaning
Stronger brush construction	Brushes secured with a continuous wire vs. clips; brushes need to be replaced less frequently
New V shaped brush design	Brushes have more contact and apply greater pressure on the steps and risers, resulting in a better cleaning
	The new brushes clean the corners more efficiently
	The new brushes remove even more liquid from the steps and risers

To put it in simpler terms, the Step 110 allows the operator to achieve unparalleled speed and performance in cleaning escalators. The end results will speak for themselves.
